

## Maintenance (Whole home water filters)

- **Pre-filters ( Sediment and Carbon filter):** Depending on water quality and usage, average 6-12 months. A gradual drop in water pressure after the filtration device is an indication that the pre-filter cartridges are nearing the end of their useful life.

- **UV lamp:** The UV lamp must be replaced after 9000 hours of continuous operation( approximately 365 days) in order to ensure adequate disinfection. If you do not use water for a period of more than month you can unplug the system to preserve the life of the UV lamp.
